und Klimaschutz

IIP-Ecosphere Platform

- Some further topics
 - Connectors to external data
 - Generic (platform-supplied) services
 - Containers
 - Deployment plans
 - Monitoring
 - Management UI

External Connectors (1)

- Generic, usually platform-supplied “service”

- Two-sided “service” with I/O
- Realizes a “protocol”, e.g., OPC UA, MQTT, AAS
- Auto-integrated, customized into applications

External Connectors (2)

```
OpcUaV1Connector myPlcOpcUaConn = {  
    id = "PlcNextOpcConn",  
    host = opcUaServer,  
    port = 4840,  
    samplingPeriod = 500,  
    security = {...}  
    input = {{type=refBy(PlcInput)}},  
    output = {{type=refBy(PlcOutput)}},  
    inInterface = refBy(PlcInput),  
    outInterface = refBy(PlcOutput)  
};
```

“Goodies”

- field mapping
- caching
- mocking
- OPC UA companion specs

Generic Services

- Typically platform-supplied services, e.g., KODEX, RTSA, etc.
- Implementation handles arbitrary data
- Specialized for application by code generation
- Special care on
 - Configuration model
 - Integration / code generation
 - Implementation of the service (wrapper)
 - IPR / licensing

A light blue callout box with a dark blue border and a pointer pointing towards the left, containing the text "Call us!".

Call us!

Containers

- Containerization of applications is beneficial
 - Required on some devices
 - Managing and removing system and Python dependencies
- If enabled, application instantiation creates containers
- Relies on service dependencies in configuration
- Supports: Docker, LXC

Not trivial: Optimal layering for maximum reuse and minimum transfer

Deployment Plan

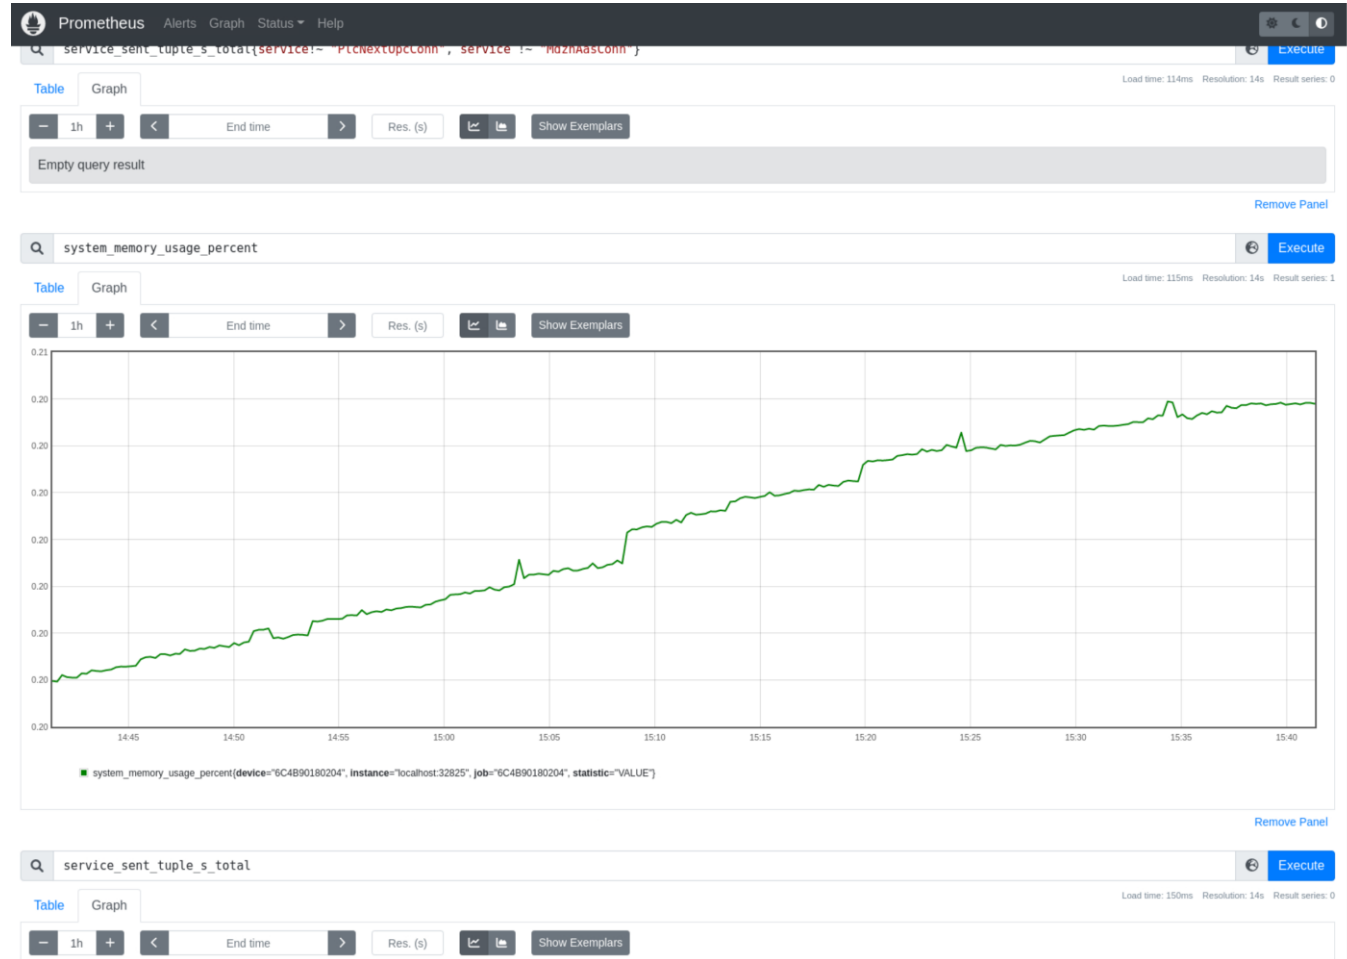

- Deploying an application can be a complex task
- Definition in configuration or Yaml file

```
DeploymentPlan plan1 = {
    name = "Separate sources/preprocessing and processing/sink.",
    id = "plan1",
    ver = "0.0.2",
    description = "Deployment on two resources",
    application = refBy(myApp),
    assignments={
        NamedServiceAssignment{resource="a6C4B90180204",
            services={refBy(mySource), refBy(myAnon)}}
        }, NamedServiceAssignment{resource="A8741D0D23ED",
            services={refBy(myKi), refBy(myAasSink)}}
    }
},
    ensembles={{leader=refBy(mySource), member=refBy(myAnon)}}
};
```

Monitoring

- Runtime monitoring of resource meters provided by platform components
- Service meters generated into code
- Binds against Prometheus
- Can cause alerts
